The western Colorado counties of Mesa, Delta, and Montrose are rich in geologic diversity . From 14,000 foot snow-capped mountains that spawn tributaries that flow into the Gunnison, Uncompahgre, and Colorado Rivers, to deep canyons and broad valleys rich in agricultural heritage. It's no wonder that western Colorado is one of the fastest growing areas in the state. To preserve this unique mix of beauty and the quality of life it promises, we must be good stewards of our lands and rivers. The **Selenium Task Force invites you to join us** to explore our watershed and learn how you can reduce your impacts to our environment while taking advantage of economic opportunities that exist for development and agricultural improvements.

Please join us on February 18th (9:30 to 3pm) at the Bill Heddles Recreation Center, in Delta, Colorado.
